Section Title: Appendix - Sections
Document Title: Pratt & Whitney Materials Control Laboratory Qualified
Commercial Laboratory List

WARNING

This document is the property of Pratt & Whitney (P&W), a division of Raytheon Technologies Corporation, and contains confidential and / or proprietary information. You may not possess, use, copy or disclose this document or any information in it, for any purpose, including without limitation to design, manufacture, or repair parts, or obtain FAA or other government approval to do so, without P&W's express written permission. Neither receipt nor possession of this document alone, from any source, constitutes such permission. Possession, use, copying or disclosure by anyone without P&W's express written permission is not authorized and may result in criminal and/or civil liability.

APPLIES TO: Pratt & Whitney Group

1. PURPOSE AND SCOPE:

This Appendix provides a listing of Commercial Laboratories Qualified by the Pratt & Whitney Group, Materials Control Laboratory (formerly Quality & Standards Laboratory), and identifies the Type of Testing that each listed Laboratory is qualified for.

2. OWNERSHIP AND APPROVAL:

The Chief, Materials Control Laboratory (MCL) PW South & Supervisor Supplier Metallurgical Development PW North, are the owners of this procedure. All revisions to this procedure must be approved by the owners and balloted in accordance with MCL Manual Section C-5.

3. DEFINITIONS:

- 3.1 **Pratt & Whitney Group** – encompasses both Pratt & Whitney Canada (PW North) and Pratt & Whitney US (PW South).
- 3.2 **Semi-quantitative Spectrographic Analysis** – The Determination of a material's chemistry to detect the presence of the alloying elements to a degree by which a positive identification can be made as to the alloy type, as well as the ability to distinguish between similar alloys.
- 3.3 **Quantitative Spectrographic Analysis** – P&W defines quantitative spectrographic analysis as “utilization of a least squares calibration curve”.

MATERIALS CONTROL LABORATORY MANUAL

Section: App. 56
Issued: 12/15/69
Revision #: AC
Revised Date: 11/07/22
Page 2 of 13

- 3.4 **Wet Chemical Analysis** – P&W defines wet chemical analysis as “gravimetric or titrametric analysis” of metallic component to identify alloys. This is not process solution analysis.
- 3.5 **Optical Emission Spectroscopy (OES)** – OES is defined as testing which utilizes “ICP (Inductively Coupled Plasma), DCP (Direct Current Plasma) and DR (Direct Reader)”.
4. **PROCEDURE:**
- 4.1 The commercial laboratories listed in [Table I](#) have been reviewed by Pratt & Whitney-Materials Group Control Laboratory (P&W-MCL) and found capable of performing the types of tests for which they are listed ([Table II](#)). This list shall not be construed as a guarantee by P&W-MCL that testing will be done properly, nor does it relieve the supplier from his contractual obligation to deliver conforming materials and parts based on accurate and valid test results.
- 4.2 The listing of a laboratory in the Table signifies only that, at the time of review, the laboratory was found capable of performing the tests for which it is listed. The laboratory is not relieved of responsibility for continued conformance as determined by calibrations and operational checks of testing and measuring equipment.
- 4.3 This list shall not be reproduced without written permission from P&W-MCL and should not be considered completely up-to-date at any time, as deletions and additions may be made by P&W-MCL.
- 4.4 Laboratories listed in [Table I](#) are required to comply with MCL Manual Section F-23, “Test and Calibration Requirements for Commercial and In-House Laboratories”, when that Section is specified on orders from their customers. Failure to comply with MCL Manual Section F-23 will disqualify the laboratory as a testing source for materials or parts.
- 4.5 At the discretion of P&W-MCL, any laboratory may be removed from this listing either by code ([Table II](#)) or its entirety ([Table I](#)) when no longer deemed qualified or when the services are no longer required by P&W or its subcontractors.

Specific Test Codes	Testing Description Yellow highlighted fields require proficiency testing per MCLM F23
1	Tensile, Room Temperature
2	Tensile, Elevated Temperature
3	Stress Rupture
4	Creep Rupture
5	Hardness (all hardness not covered by HIM Code 1)
6	Impact
7	Metallographic Examination - Not covered by another suffix (See Note 9)
7-a	ME - Microstructure/Grainsize
7-b	ME - Abusive Machining
7-c	ME - Surface Contamination of Titanium
7-d	ME - Braze
7-e	ME - Weld
7-f	ME - Nonconventional Machining (ECMR, EDMR, LBMR, EBMR, Chem milling)
7-g	ME - Fasteners
7-h	ME - Heat Treat
7-i	ME - Coatings (Vapor/Pack/Thermal)
7-k	ME - Non-Metallic Macro/Microscopic Evaluation
8	Wet Chemical Analysis (See Note 2)
9	OES Quantitative Spectrographic Analysis (See Notes 3, 4, & 5)
10	Salt Spray
11	Heat Treating (to condition lab specimens)
12	Gas Analysis - Combustion (C, S)
12-a	Gas Analysis - Inert Gas Fusion O-Oxygen, N-Nitrogen, H-Hydrogen
13	Semi-quantitative Analysis (See Note 1)
14	Sieve Analysis
15	Plastics (See Note 8)
16	Rubber Materials including Polymers (See Note 8)

MATERIALS CONTROL LABORATORY MANUAL

Section: App. 56
Issued: 12/15/69
Revision #: AC
Revised Date: 11/07/22
Page 12 of 13

Notes:

1. P&W defines semi-quantitative spectrographic analysis as "The Determination of a material's chemistry to detect the presence of the alloying elements to a degree by which a positive identification can be made as to the alloy type, as well as the ability to distinguish between similar alloys".
2. P&W defines wet chemical analysis as "gravimetric or titrametric analysis" for the determination of metallic components. This is not process solution chemistry.
3. ICP, DCP, Direct Reader.
4. P&W defines quantitative analysis as "utilization of a least squares calibration curve".
5. Code numbers with an element suffix (e.g.; 17Pb) designate qualification for analysis of that element on cast turbine airfoil alloys by the specified test method.
6. The letter "C" suffix to Code 17 (Atomic Absorption) also designates qualification for residual cerrobend analysis in hollow core blades and vanes.
7. The letter "R" suffix to Code 19 (XRD) also designates qualification for retained austenite.
8. Qualification for Codes 15 and 16 is not required for simple identification tests such as those listed in MCL Manual Section S-8.
9. Code 7 does not include metallographic examination of thermal spray coatings, pack process diffusion coatings, plasma or vapor deposition coatings at qualified commercial laboratories.
10. The letter "R" indicates the Ring Core Method, "S" indicates Slotting Method, "X" indicates XRD Method.
11. Calibration per note 4 does not apply. Analysis is limited to concentrations of 10ppm and below. Analyses above this level may be approved by the cognizant SMCS on a case by case, element specific basis. The letter "G" suffix to Code 24 indicates the glow discharge (GSMS) method. The letter "I" suffix to Code 24 indicates the ICP (ICP-MS) method.
12. The letter "P" indicates E-205 and the letter "A" indicates ASTM F 945.
