places where explosives may be stored or otherwise present, the hazard type (if any) of those explosives and the description and the maximum amount of those explosives are as shown below or, in the case of the places for storage, shown on the plan appended to this licence.

Place 1- as identified on the plan appended to this licence See Note 1

Hazard Type	Description of the explosive stored or otherwise present Maximum quantity st otherwise present		
HT1 See note 2		1KG	
	or		
HT2 some or all items being of more than 0.7 kg net mass See note 2		5KG	
	or	,	
HT2 every item being of 0.7kg net mass or less See note 2		5KG	
	or	•	
HT3 See note 2		5KG	
	or		
HT4 See note 2		5KG	
	or	1	
Other explosives See Note 3	None		

10/14 25-13b

This licence does not include conditions attached under the provisions of regulation 13 (7) See note 4.

This licence replaces all other licences previously issued for this site and is valid for the period:

From:	22 nd October, 2024.	To:	31 st October, 2029.		
Authori	sed by: Michael Chambers				
Signatu	ire: Manbel	Date:	9 th December, 2024.		

For information:

Notes:

- Each place where explosives are to be stored should be identified on the appended plan or plans of the site of the site. Where explosives are stored in more than one place the licence must state that, must specify each place, identify the hazard type (if any) of the explosives; describe the explosives which may be stored or otherwise present at any one time in that place; and the maximum amount of explosives which may be stored or otherwise present at any one time in that place and the appended table shows this.
- 2 Paragraph 1 (6) of Schedule 5 of the Explosives Regulations 2014 requires that where explosives of different hazard types are in one store, the explosives must be treated as belonging to the hazard type which would require the greatest separation distance for the total quantity of those explosives.
- Explosives that are not generally described in terms of hazard type but [whose storage is to be subject to the conditions of the licence should be listed here. They will comprise those explosives detailed in regulation 27 (2) (a) and those detailed regulation 27 (3) (b) (d) inclusive of the Explosives Regulation 2014.
- Where conditions are attached to a licence under the provisions of regulation 13 (7) of the Explosives Regulations 2014 they should be appended to this form and the licensee should have their attention drawn to them.
- 5 There is a plan that shows the place within this site where explosives may be stored.
- All quantities are net mass of explosives. The maximum amount of explosives referred to in the tables for each place where explosives are stored has been determined from the tables given in schedule 5 of ER2014 and the distances to relevant protected places relevant on the date this licence was granted. The distances to be maintained to the different classes of protected places are shown in the table below.

The distances to be maintained to protected places from places where explosives may be stored are:

Place	Class A	Class B	Class C	Class D	Class E	Class F	Class G	Class H
1	8	11	23	30	40	15	30	30

Insert additional lines for extra places.

If after the grant of this licence the separation distances can no longer be met, you:

- must reduce the quantity of explosives being stored to ensure your continued compliance with the separation distance requirements of regulation 27 of ER2014; and
- should contact your licensing authority as a licence variation may be needed (reg 16(1)(a))

Licence No 975
